ReliSource
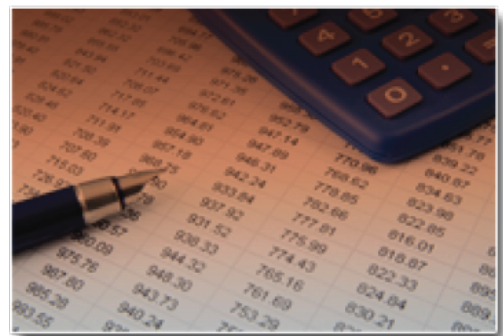

Case Study
Financial Management

ReliSource has successfully delivered financial and billing systems for its client and integrating these systems with existing functional information systems. The financial systems developed by ReliSource engineering team are designed to be secure, highly available, scalable, maintainable, and provide data mining and reporting capabilities.

Our expert engineers have hands on knowledge and practical experience to develop and implement a complete financial management solution for any hospital or clinic with modules containing patient billing facility which automatically capture all charges that accrue against services provided to patients, cash management, procurement and collection.

The financial systems developed by ReliSource will facilitate you to set up the hospital budget with respect to the operational and administrative expenses, check budget availability status in real time and access web based financial information portals.
